success of the

TXT e-solutions will be unveiling new software capabilities at this year's Retail Solutions exhibition (**stand F48**). New business intelligence and reporting modules, marketed as **TXT Drive Analytics**, will be integrated to its existing range of demand forecasting and replenishment software, currently used by many retailers including Habitat, Gerry Weber and VF Europe (Wrangler and Lee jeans). Based on the latest business intelligence developments, **TXT Drive Analytics** will help retailers stay one step ahead of seasonal fluctuations in demand by using a more powerful analytical engine, which can drill down deeper for the necessary information for getting the right product, at the right time, to the right store. The new business intelligence tools are expected to lead to greater control of supply chain

operations through increased visibility of demand from warehouse to store.
