

SA.F.ER - SAfe Facility EnviRonment: ensure business continuity during COVID-19 outbreak

Discover our end-to-end platform to ensure business continuity and enhanced workers' and guests' safety within production environments and workplaces

TXT, together with the management consulting company HSPI, created SA.F.ER, our Safe Facility Environment platform that ensures business continuity to companies during the COVID-19 outbreak, as mandatory to restart activities in a safer way. SA.F.ER is based on 4 building blocks:

- People & Organizations
- Processes & Procedures
- Privacy, GDPR & Legal Compliance
- Technology solutions

The SA.F.ER technology solution is divided into the following modules:

- **BASIC**: includes the 3 basic services: i) temperature measurement, ii) Personal Wearable for maintaining social distance and iii) contact tracing
- **PREMIUM**: allows to increase the range of basic services with 6 additional options ranging from: i) targeted and certified sanitization, ii) anti-assembly and virtual fences for greater safety in the work areas, iii) tracking of the flow of goods or people, iv) digital bulletin board, v) access planning and space management, vi) measurement of biometric parameters.

We allow to manage privacy, organizational and managerial aspects (e.g., shiftwork, access to common areas) through a scalable solution for the detection of unsafe situations for employees, suppliers and other aiming to ensure the respect of the social distancing (e.g. 1.5m-2m) by using best-in-class wearable devices.

The solution provides to organizations a series of Dashboards for tracking contacts and detecting risks, being compliant with privacy policies. Our offering covers both the assessment of privacy and legal aspects (GDPR, compliance) and the delivery of the final solution.
